1878. Oct. 10. 1878. All day continued our trip, in the AM

The weather was generally very bad, with much overcastness, though there were intervals of clear weather. We reached the first station at 10:30 AM, and here we found the thermometer at 65° F. The air was very dry, and the temperature did not rise above 70° F. during the day. At 1 PM we reached the second station, where the thermometer was at 68° F. The air was still very dry, and the temperature did not rise above 72° F. During the afternoon we had several short intervals of clear weather, which were very welcome, as they gave us a chance to get some rest and refreshment. At 3 PM we reached the third station, where the thermometer was at 70° F. The air was still very dry, and the temperature did not rise above 74° F. During the afternoon we had several short intervals of clear weather, which were very welcome, as they gave us a chance to get some rest and refreshment. At 5 PM we reached the fourth station, where the thermometer was at 72° F. The air was still very dry, and the temperature did not rise above 76° F. During the afternoon we had several short intervals of clear weather, which were very welcome, as they gave us a chance to get some rest and refreshment.

At 7 PM we reached

the fifth station, where the thermometer was at 74° F. The air was still very dry, and the temperature did not rise above 78° F. During the afternoon we had several short intervals of clear weather, which were very welcome, as they gave us a chance to get some rest and refreshment.
